

Perry Spyropoulos

Technical Lead · Senior Software Engineer · Full-Stack Developer

Bethlehem, PA · 843.901.1168 · perry.spy@gmail.com

SUMMARY

Technical lead and senior software engineer with 15 years of full-stack experience building production systems for federal and commercial clients — VA, FDA, NIH — at Booz Allen Hamilton. Active Secret clearance. Deep expertise in React ecosystems, GraphQL and REST APIs, cloud-native data pipelines, Kafka stream apps, and OpenSearch. Hands-on practitioner of agentic AI development, applying tools like GitHub Copilot and Claude Code to accelerate delivery on real production systems.

EXPERIENCE

Lead Associate · Technical Lead / Senior Software Engineer November 2016 – Present
Booz Allen Hamilton · Bethlehem, PA (formerly Charleston, SC)

VA Work Queue Modernization (2021–Present)

- Led a three-engineer team replacing a legacy VA claims processing system — cutting routing bottlenecks and giving VA staff real-time visibility into veteran service requests across the country.
- Architected and built a React micro-frontend using single-spa, Redux, and Apollo Client, enabling independent deployability and faster iteration across a large-scale federal codebase.
- Built a GraphQL API over OpenSearch that replaced slow, ad-hoc queries with flexible real-time data access — reducing the time claims processors spend finding and acting on work queue information.
- Drove team-wide adoption of GitHub Copilot, measurably accelerating feature delivery and reducing time spent on repetitive implementation tasks.
- Career Manager for four direct reports: setting development goals, running performance reviews, and helping each person grow toward their next role.

Stack: *React, single-spa, Redux, Apollo Client, GraphQL, OpenSearch, Apache Kafka, Node.js, GitHub Copilot*

Opioids Data Warehouse (ODW) | FDA (2019–2021)

- Led UI development for a custom FDA research platform that consolidated disparate opioid datasets into a single queryable interface — replacing manual data wrangling across siloed systems and giving researchers the ability to run complex cross-source analyses for the first time.

Stack: *React, Java Spring, Micro-service Architecture, PostgreSQL, Elasticsearch*

Dark Labs | Red/Blue Team Intelligence Hub (2018–2019)

- Built a React intelligence hub for Red and Blue cybersecurity teams, centralizing threat information and eliminating the coordination overhead that comes with fragmented tooling during active engagements.

Stack: *React, Redux, Thunk, Axios, Async/Await, ES6+*

NIH Insights | Patient Survey & Video Submission App (2017–2018)

- Built a Swift iOS app that let patients submit surveys and video responses directly to NIH researchers — replacing a fragmented manual intake process and giving researchers structured, analyzable data they could act on immediately.

Stack: *Swift, PromiseKit, Alamofire, AVFoundation*

SecureGive | Multi-Platform Donation Platform (2016–2018)

- Promoted to Tech Lead mid-2018. Delivered a secure donation platform for churches and nonprofits across web, iOS, Android, and kiosk — shipping a RESTful API, Admin CMS, customer webapp, Windows kiosk, iPad kiosk, Android app, and iPhone app on a single shared backend.

Stack: *React, Redux, React Native, Scala, Akka HTTP, Postgres, AWS (EC2, RDS, S3), Swift, CircleCI*

Frontend Developer

March 2016 – November 2016

Qonceptual LLC · Charleston, SC

- Shipped frontend features across five commercial products — PinScout, BATO Dashboard, Strongforce Dashboard, Evervest, and MobilePBX — moving quickly across different codebases and product contexts.

Stack: *Angular 1.5 & 2, Ruby on Rails, SailsJS, GoJS, ES6, SASS, LESS*

Software Developer

June 2011 – March 2016

SPARC LLC · Charleston, SC

- Full-stack engineer on VA NWQ (National Work Queue), the direct predecessor to the VA work queue system I now lead at Booz Allen — giving me end-to-end perspective on the problem that few engineers in this space have.
- Built VA VBMS Core 2, a veteran benefits management platform used by VA staff to process claims, alongside commercial products including STEM Premier and SuitedTo/Prepado.
- Owned UX design end to end: user research, workflow design, wireframing, and prototyping.

Stack: *Java Spring MVC, Oracle DB, AngularJS, jQuery, Java Play, MongoDB, Node.js, Bootstrap*

Trader / Modeler Intern

May 2010 – August 2010

ATD · Charleston, SC

- Built a Perl-based stock similarity tool with configurable metric weighting to surface trading candidates, supporting a high-throughput automated trading operation.

Teaching Assistant

January 2009 – May 2010

College of Charleston · Charleston, SC

- TA for introductory programming (Python, Java) over three semesters — led labs, graded work, and tutored students one-on-one.

Bioinformatics Intern

May 2009 – August 2009

Medical University of South Carolina (MUSC) · Charleston, SC

- Analyzed gene regulation in hematopoietic stem cells via genechip microarray data, building statistical models in R to surface meaningful patterns.

TECHNICAL SKILLS

Frontend

React · single-spa (Micro-Frontend) · Redux · Apollo Client · React Native · AngularJS · Angular 2 · TypeScript · JavaScript ES6+ · HTML5 · CSS3 / LESS / SASS

Backend & APIs

GraphQL · REST APIs · Java Spring MVC · Java Play · Scala / Akka HTTP · Node.js · Python · R

Data & Infrastructure

OpenSearch / Elasticsearch · Apache Kafka · PostgreSQL · Oracle DB · MongoDB · AWS (EC2, RDS, S3, Lambda) · Microservices Architecture

AI & Tooling

GitHub Copilot · Agentic AI Development · Claude Code · Machine Learning · Git · JIRA · CircleCI

Mobile

Swift / iOS · React Native · AVFoundation · Alamofire

Leadership & Process

Technical Leadership · People Management · Agile / SAFe / SDLC · 508 / ADA · Mentorship · UX / UI Design

EDUCATION

B.S. in Computer Science · Magna Cum Laude

College of Charleston · Charleston, SC

August 2008 – May 2011

Coursera / Stanford University — Certificates of Accomplishment

Machine Learning (November 2013) · Game Theory (March 2013)

CLEARANCE

Active Secret Clearance
